

JOHN DEERE RECOMMENDED TO REMOTELY MONITOR SUPPORT VEHICLES IN OPERATIONS CENTER

RAZOR TRACKING

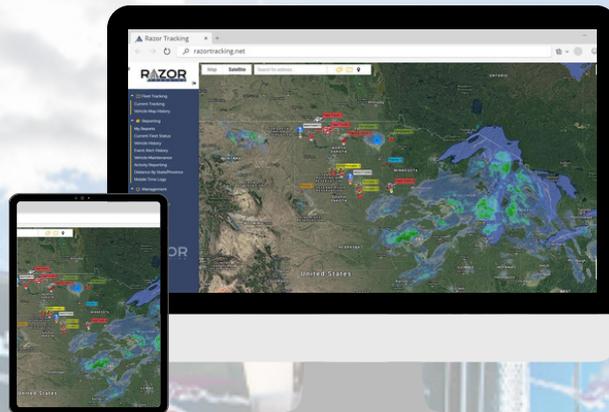

JOHN DEERE OPERATION CENTER

Razor Tracking can be specifically designed for agronomy centers that do custom application of either wet or dry fertilizer or chemical as well as any farm delivery, grain transport, over-the-road trucking, seed delivery, and equipment rental. Razor Tracking is suitable for all farmers with our agriculture GPS tracking features that allow you the capability of both fleet tracking and asset tracking, to manage your entire farm from equipment to employees. Farms that have implemented Razor Tracking have improved their efficiency by 25-30% while decreasing fuel consumption by 15%. Most farms have seen these benefits within their first 30 days of activation.

TRACK & COORDINATE ALL YOUR VEHICLES & EQUIPMENT ON ONE SCREEN

REAL-TIME TRACKER

- Plug & Play Installation
- Pings Multiple Times A Minute
- 6-Month Seasonal Suspension
